

MBOSS PTFE Coated Fiberglass Fabric

The "M-BOSS" series is designed for use in the flexible packaging industry where a visible heat seal is required. Previously when a package was required to have a visible seal a porous PTFE-glass fabric had to be used, the problem with this method was low PTFE-content which meant fewer seals before failure and the openings of the porous fabric eventually filled up with melted film.

M-BOSS fabrics are non-porous.

A proprietary coating process allows for a generous amount of PTFE to be applied to the fabric while still allowing the natural texture of the fiberglass to come through, resulting in a long lasting product that embosses a readily visible pattern into the film.

M-BOSS 10 Mil

M-BOSS 14 Mil

Currently M-BOSS™ fabric is available in two thicknesses:

.010" (.25mm)
.014" (.36mm)

Maximum available width is 36". Slit rolls are available in widths from 1/2" - 35" and in roll lengths of 36yds.

Andrew Roberts Inc. is a leading converter and fabricator of high performance coated fabrics tapes & belts. Our converting capabilities include:

Die Cutting - Slitting - Sheeting - Heat Sealing - Sewing
